

### Static and Dynamic Durable Subscriptions

- Static
  - Created by administrator
  - Stored in configuration file `durables.conf`
- Dynamic
  - Created by client API
  - Not stored in configuration files
- Durable subscription is deleted when
  - Administrator issues command `delete durable`
  - Durable subscriber calls `unsubscribe` API

## Static and Dynamic Durable Subscriptions

Static durable subscription is created by the Administrator and stored in configuration file **`durables.conf`**.

Dynamic durable subscription is created when the client application invokes an API to create a new durable subscription. It is not stored in configuration file but is not destroyed when the EMS Server restarts.

If EMS Server detects the conflict between a static and a dynamic durable subscription, it maintains the earliest specification and issues a warning.

The durable subscriber can delete its subscription by using `unsubscribe` API.

To delete a static or a dynamic durable subscription, the Administrator issues the command **`delete durable`** with the durable name and Client ID as arguments.
