

Subscription via Wildcard Patterns

- EMS Wildcards
 - Identify a collection of topics in a subscriber
 - Not for publishers, queue senders or receivers
 - Patterns
 - * : matches any one element
 - > : one or more trailing elements
- Using wildcards for subscription
 - Example: subscription on Dev.*
 - Receives messages published to Dev.a, Dev.b
 - Does not receive messages published to Dev, Dev.a.b

Subscription via Wildcard Patterns

TIBCO EMS supports wildcard notation:

- * (any token/element): TEST.* applies to TEST.new, TEST.hello, etc., but not TEST.new.account.
TEST.*.* applies to TEST.new.account, etc.
- > (one or more trailing elements): TEST.> applies to TEST.new and Test.new.account.

You can subscribe to wildcard topics, but not publish to them. You cannot send or receive to wildcard queue names. Also, you cannot publish to a wildcard topic name.
