

Advantages of Dynamic Destinations

- Simplifies administration of destinations
- Developers create & destroy destinations
 - Without access to administration API
- Can be promoted to static destinations

```
tcp://localhost:7222> show queues
```

Queue Name	SNFGXIBCT	Pre	Rcvrs	All M:	Msgs
>	-----	5*	0	0	0
\$sys.admin	-----	5*	0	0	0
\$sys.lookup	-----	5*	0	0	0
\$sys.redelivery.delay	-----	5*	0	0	0
\$sys.undelivered	-----	5*	0	0	0
* \$TMS\$.EMS-SERVER.5A3255ACD9D45.6	-----	5	1	0	0

Advantages of Dynamic Destinations

Administrators can delegate a hierarchy of destination names and privileges to applications without requiring a complete list of fully qualified names for every application.

Developers can “create” and “destroy” destinations without requiring full administration access or access to the administration API.

This also allows better utilization of system resources since the dynamic destinations are removed from the infrastructure when not required.
