Enterprise Service Bus: Components

TIBCO ActiveMatrix BusinessWorks forms the integration framework for your EAI solutions. Within this framework, develop automated processes, for example, that take data sent by one adapter, and transform the data to be received by another adapter. The integration framework has monitoring, management and security built-in, to quickly "lock down" your integration. Messaging is also included as part of this framework.

Using adapters and messaging, ActiveMatrix BusinessWorks connects to applications of different types and databases to integrate all aspects of your enterprise.
